How to Update Java on Your Desktop Computer

You can update Java – Through the ‘Software Center’ on your pc

1. Open Software Center by clicking on the Start/Run icon.

2. And typing ‘Software Center’ in the Search field.
3. Then click on the ‘Software Center’ program name that appears.

4. Once Software center is open, place a check mark next to "Java Update 8.0.45 - Java update" and click INSTALL in the lower right of the screen.

5. This will remove older versions of Java and install version 8.0.45 with security settings built in. You may be required to restart. The screen will show "Installed" once complete.
